COVID-19 vaccination is **NOT** required for school attendance!

Serious side effects of COVID-19 vaccination includes anaphylaxis, blood clots - thrombosis with thrombocytopenia syndrome (TTS), myocarditis and pericarditis, Guillain-Barré Syndrome, spontaneous abortion (miscarriage before 20 weeks), shingles, and lymphadenopathy.

Natural SARS-CoV-2 infection provides robust immunity.

Children are not at risk - statistically they have a 0% chance of dying from COVID-19, much lower than their risk of dying from the flu

In the U.S., the median age of death from COVID-19 is **78** years old. **94%** of deaths had underlying conditions, the average having more than two. **78%** of people hospitalized were overweight or obese.

No COVID-19 vaccine is FDA approved. They are all under Emergency Use Authorization (EUA). According to federal law that means they are experimental and you have a right to refuse.

The **PREP Act** removes **all** liability for injury or death associated with COVID-19 vaccination - you cannot sue.

COVID-19 vaccines are produced with aborted fetal cells in some way. The Pfizer and Moderna vaccines were developed using the aborted fetal cell strain **HEK293**. The Johnson and Johnson vaccine is produced using the aborted fetal cell strain **PER.C6**.

COVID-19 vaccine trials were not designed to determine if the vaccines decrease mortality or **prevent transmission or infection**.

There have been thousands of deaths and hundreds of thousands of serious adverse reactions following COVID-19 vaccination reported to the Vaccine Adverse Events Reporting System (VAERS).

We think you should know.
